

Integrated Services Solution

The context

It is the nature of large-scale construction, engineering and energy capital expenditure projects that complications could arise anywhere along the supply chain and at any stage of the project life cycle. Sites may be in remote locations, span multiple territories and be supported by international supply chains, making oversight a complex task. Safety and quality are major concerns, and managing these at each phase – planning, design, procurement, site construction and subsequent maintenance – calls for an integrated approach to project management.

The challenge

Every project is distinct, and their safe, successful completion demands input from a diverse range of disciplines. Projects can also be geographically diverse with complex international supply chains. This diversity makes an integrated approach to project management both challenging and essential.

In response to these requirements, integrated services solutions provide tailored packages of services designed to support and manage safety and quality at all stages of the project lifecycle.

Our service

As a leading provider of technical services for the global energy, engineering and construction industries, you can rely on Intertek to deliver expert integrated solutions. We can help optimise the engineering and technical aspects of every phase of your project, including planning, design, procurement, site construction and maintenance.

We understand that every company and every project is unique, which is why no two integrated services solutions are alike. We offer bespoke packages tailored to meet your specific needs, from improving performance in one specific area to managing entire supply chains.

Solutions may include health and safety support and consultancy, procurement support and vendor inspection services, expediting, technical auditing and a host of other services designed to ensure the safety, quality and efficiency of your project.

We take a strategic approach to planning support and management services, with the aim of providing sustainable solutions that deliver long-term benefits.

The benefits

While every solution is different, with our support you will be able to boost efficiency, increase quality and reduce costs.

Benefit from our global supplier knowledge for more cost effective procurement, utilise our staffing services to manage fluctuating technical personnel requirements,
